How does God change the World without showing his Hand?

By Dr. rer. nat. habil. Norbert Schwarzer

Using a bit of Material Science

It is almost comical, that we already had asked this question (and answered it), but we never asked about God, but always: “Can one man change the world without showing his hand?”

Now we intend to ask the same question with respect to God and here is our – slightly adjusted – answer:

Let’s start with a bit of material science first.

Thereby the question was brought forth to me, whether a single and most localized, which is to say almost point-like, defect could influence an ensemble of atoms or molecules within a component in such a way that it (the defect) dramatically influences the properties of the component, but does not show itself as the culprit for the observed parameter change.

We had the answer ready, because we had already dealt with this question in connection with a slightly different and rather more theoretical application, namely the physical riddle about dark matter and energy [1]. The answer is mathematically clear: It is possible that a certain defect creates a parameter change for a – compared to its own size – huge area inside any material structure without showing itself. Thereby the source only needs to radiate its influence in a certain attitude which leads to a suitable collection of plane waves, which are themselves just superposed signals coming from the defect in a very particular form (see below).

An outside observer, however, would only see the plane waves and cannot make out the source. In other words, he cannot see God acting, but only realizes the action.

Going back to the material science problem, from this automatically follows, that now engineers, who cannot find the source for a certain global failure mechanism in a who-knows-what for an application, have just the perfect excuse.

Only measurements of very local character would allow to move further forward in such cases. In mechanics, for instance, this could be Nanoindentation and highly sensitive scratch and tribo-tests, potentially combined with the so-called “calo method” for higher depth sensitivity [2, 3]. But here it only works, because the plane-wave pretense is never perfect. With respect to God’s actions I wouldn’t be so sure.

A bit of Math

Now we are ready to also answer the question in the main title namely:

“How does God change the world without showing his hand?”

Well, as it is shown in [4], in bigger socio-economic systems (societies), single individuals or even groups of the latter are radiating their influence to the environment (rest of the society) in multidimensional sphere-like waves. Thus, the mathematical structures of any form of communication or information-transmittance is quite similar to the ones shown in the equation and hence, are equipped with the same potential to be superposed to globally appearing (and acting) as apparent plane waves.

God can just do the same, respectively, apply the same trick.

$$e^{i\cdot C_{jt}\cdot z}=\sum_{l=0}^{\infty}(2\cdot l+1)\cdot i^{l}\cdot j_{jk}\left[C_{jt}\cdot r\right]\cdot P_{l}\left[\cos[\vartheta]\right];$$
$$k=k_{l}=\frac{\sqrt{1+4\cdot 1\cdot(1+1)}-1}{2}=0,1,2,3,\ldots \text{ for } l=0,1,2,3,\ldots \qquad (1)$$

A bit of Hell… as a Warning!

And what about the Devil?

… Clearly it follows, a global influencer, does not necessarily need to show his face (or hand) in a potentially evil game, changing the world really badly… possibly even plunges it into total chaos leading to the extinction of humanity or those parts of it that are little loved by the "defect". He can play his evil games and spread his "messages" and actually do this himself without having to appear publicly as an evildoer. It simply depends on the type of emittance in order to carry the "evil message" in the end, while the actual source of the evil is never visible.

Unfortunately, just now, we can't think of any example where something like this has been done in the past or is currently being attempted

... but at least we now know that there is such a possibility.

Who knows what that might be good for.
